Superstore sales EDA Project

1. Introduction:

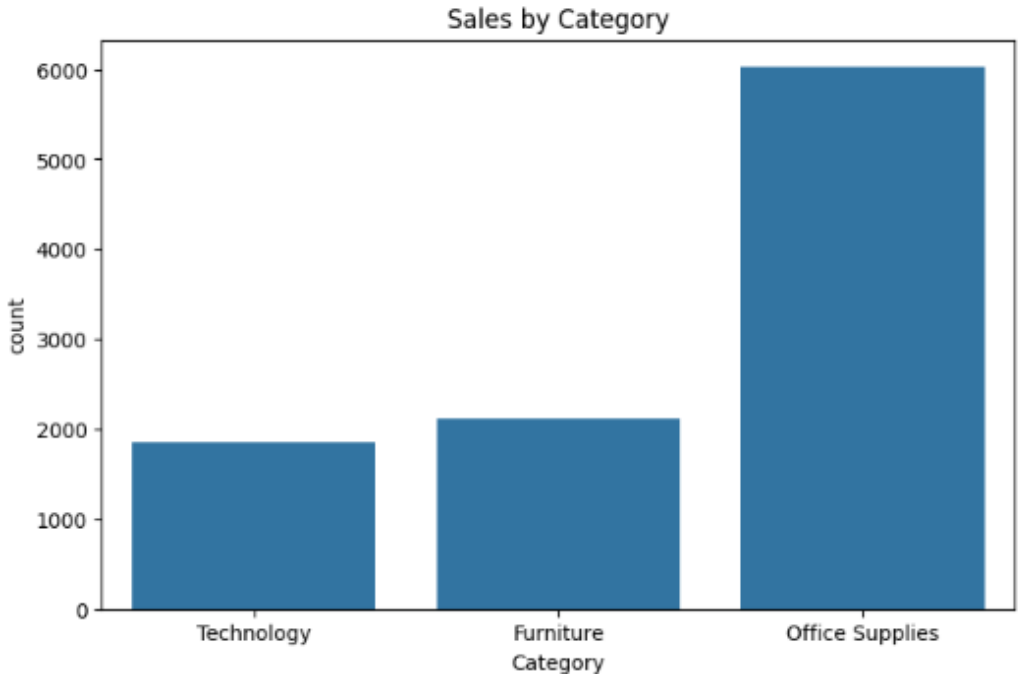

This project analyzes 9994 orders from the US Superstore to understand sales, profit, and customer behavior

2. Data Cleaning:

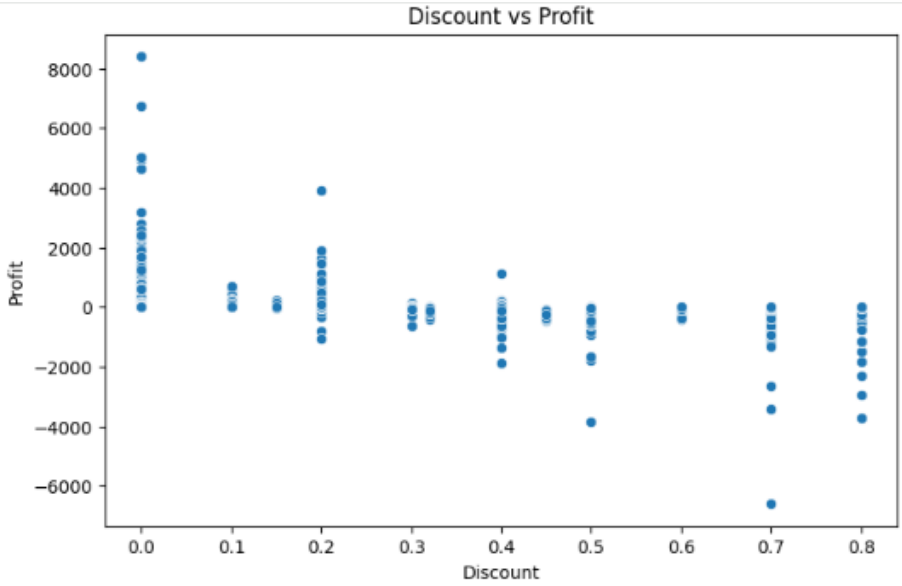

Checked for missing values, converted Order Date to date format, and removed duplicates.

3. visualization

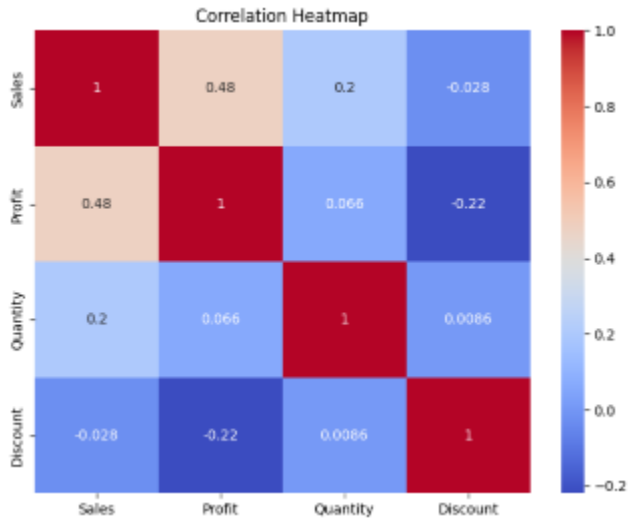

Sales by category

Discount VS Profit

Corelation heatmap

4. Key Insights:

Technology category has the highest Sales and Profi t.West region performs the best .Tables sub-category has the highest loss (-17725).Higher discounts lead to lower profit.

5. Conclusion:

Profit can be increased by reducing discounts on loss-making products and focusing more on the Technology category.
